

# Student representatives meeting 1

**Time:** 17:00, 16.09.2021

**Secretary:** Johan Atterfors

## Present

Ana Bove, Johan Atterfors, Viktor Fredholm, Sanna Persson, Artur Marecos Mendes Leitao, Benjamin Sannholm, Filip Antonijevic

## Comments and Response

Student: Course is good, would be good to also present applications of the theory. TAs are good! Exercises are of varying difficulty. Tuesday exercises seemed simpler and Friday seemed more difficult.

Teacher: We will have guest lecturers showing applications of what we are seeing, but we need to finish the foundations before their lectures. Course content is increasing in difficulty and that might make it feel like sessions are on different/increasing levels.

Student: "home work" announcements works good.

Student: It is desired that reading material is published in advance and to have more examples in lectures. Recorded lectures are wanted for those who cannot take part on the lectures.

Response: Reading material is published in advance, both selected section from the book and pdf with the slides. Most examples are supposed to be in exercises sessions and assignments, occasional examples in lectures since there is a need to balance the time between theory and exercises, also there was a focus on theoretical parts (including proofs) this week which makes it more difficult for examples. We will not be recording the lectures, if someone cannot attend it the material is anyhow available in the book
