Was things really better back in the "good ol' days"?

How would your morning be like without active noise cancelling?

What if you couldn't shazam that song you heard last evening?

And what if we couldn't quantify natural phenomena?

What does these historically and important discoveries as well as their modern applications have in common? Our understanding for them has been enabled by the mathematical field of Fourier Analysis!

The chance that next important discovery is aided by this branch of math and science is by other words big, so let's learn more about it!

Grandpa, was there a time when you needed to put up with all grandmas nagging?

Unfortunately back in our days we didn't have noise cancelling...

Here we can see that he suffers from a broken arm!

I heard this tune the other day, it went something like ..., do you know what the name is so i can add it to my playlist?

> Don't worry, it's just a flesh wound

We got a bigger problem... Your invasive exam seems to have killed him...
