Green - for the exam

Purple - recommended, not on exam

<i>Preface</i>	<i>xv</i>
<i>About the Author</i>	<i>xxi</i>

Chapter 1 Foundations for an Applied Science of Data Visualization 1

Visualization Stages	4
Experimental Semiotics Based on Perception	5
Semiotics of Graphics	6
<i>Are Pictures Arbitrary?</i>	7
Sensory versus Arbitrary Symbols	9
<i>Properties of Sensory Representation</i>	12
<i>Testing Claims about Sensory Representations</i>	15
<i>Representations That Are Arbitrary</i>	15
<i>The Study of Arbitrary Conventional Symbols</i>	17
Gibson's Affordance Theory	17
A Model of Perceptual Processing	20
<i>Stage 1. Parallel Processing to Extract Low-Level Properties of the Visual Scene</i>	21
<i>Stage 2. Pattern Perception</i>	21
<i>Stage 3. Visual Working Memory</i>	22
<i>Attention</i>	22
Costs and Benefits of Visualization	23
Types of Data	25
<i>Entities</i>	26
<i>Relationships</i>	26
<i>Attributes of Entities or Relationships</i>	26
<i>Data Dimensions: 1D, 2D, 3D, ...</i>	26
<i>Types of Numbers</i>	27
<i>Uncertainty</i>	28
<i>Operations Considered as Data</i>	28
Metadata	29
Conclusion	29

Chapter 2 The Environment, Optics, Resolution, and the Display 31

The Environment	32
<i>Visible Light</i>	32
<i>Ecological Optics</i>	32
<i>Optical Flow</i>	34
<i>Textured Surfaces and Texture Gradients</i>	35
<i>The Paint Model of Surfaces</i>	36
The Eye	41
<i>The Visual Angle Defined</i>	42

Lens	43
Optics and Augmented-Reality Systems	44
Optics in Virtual-Reality Displays	47
Chromatic Aberration	48
Receptors	49
Simple Acuities	50
Acuity Distribution and the Visual Field	52
Brain Pixels and the Optimal Screen	55
Spatial Contrast Sensitivity Function	59
Visual Stress	62
The Optimal Display	63
Aliasing	64
Number of Dots	66
Superacuities and Displays	66
Temporal Requirements of the Perfect Display	67
Conclusion	68
 Chapter 3 Lightness, Brightness, Contrast, and Constancy	69
Neurons, Receptive Fields, and Brightness Illusions	70
Simultaneous Brightness Contrast	73
Mach Bands	74
The Chevreul Illusion	74
Simultaneous Contrast and Errors in Reading Maps	75
Contrast Effects and Artifacts in Computer Graphics	75
Edge Enhancement	76
Luminance, Brightness, Lightness, and Gamma	79
Constancies	79
Luminance	80
Displaying Details	82
Brightness	82
Monitor Gamma	83
Adaptation, Contrast, and Lightness Constancy	84
Contrast and Constancy	85
Contrast on Paper and on Screen	85
Perception of Surface Lightness	87
Lightness Differences and the Gray Scale	88
Contrast Crispening	89
Monitor Illumination and Monitor Surrounds	90
Conclusion	93
 Chapter 4 Color	95
Trichromacy Theory	96
Color Blindness	98
Color Measurement	98
Change of Primaries	100

Chromaticity Coordinates	102
Color Differences and Uniform Color Spaces	105
Opponent Process Theory	108
Naming	108
Cross-Cultural Naming	109
Unique Hues	109
Neurophysiology	110
Categorical Colors	110
Properties of Color Channels	111
Spatial Sensitivity	111
Stereoscopic Depth	112
Motion Sensitivity	112
Form	113
Color Appearance	114
Monitor Surrounds	114
Color Constancy	114
Color Contrast	115
Saturation	116
Brown	117
Applications of Color in Visualization	117
Application 1: Color Specification Interfaces and Color Spaces	117
Color Spaces	118
Color Naming Systems	120
Color Palettes	122
Application 2: Color for Labeling (Nominal Codes)	122
Application 3: Color Sequences for Data Maps	128
Form and Quantity	129
Interval Pseudocolor Sequences	132
Ratio Pseudocolors	132
Sequences for the Color Blind	133
Bivariate Color Sequences	134
Application 4: Color Reproduction	135
Conclusion	138
 Chapter 5 Visual Salience and Finding Information	 139
Eye Movements	140
Accommodation	142
The Eye Movement Control Loop	142
V1, Channels, and Tuned Receptors	143
The Elements of Form	145
The Gabor Model and Visual Distinctness	147
A Differencing Mechanism for Fine Discrimination	149
Feature Maps, Channels, and Lessons for Visual Search	150
Preattentive Processing and Ease of Search	152
Attention and Expectations	156
Highlighting and Asymmetries	157

Coding with Combinations of Features.....	158
Coding with Redundant Properties	159
What Is Not Easily Findable: Conjunctions of Features.....	159
Highlighting Two Data Dimensions: Conjunctions That Can Be Seen.....	160
Integral and Separable Dimensions: Glyph Design	162
Restricted Classification Tasks	163
Speeded Classification Tasks	164
Integral–Separable Dimension Pairs.....	167
Representing Quantity	168
Representing Absolute Quantities	169
Multidimensional Discrete Data: Uniform Representation versus Multiple Channels	170
Stars and Whiskers.....	172
The Searchlight Metaphor and Cortical Magnification	173
Useful Field of View.....	173
Tunnel Vision, Stress, and Cognitive Load.....	173
The Role of Motion in Attracting Attention	174
Motion as a User Interrupt.....	174
Conclusion.....	176
Chapter 6 Static and Moving Patterns.....	179
Gestalt Laws	181
Proximity	181
Similarity	182
Connectedness.....	183
Continuity.....	183
Symmetry.....	185
Closure and Common Region	186
Figure and Ground.....	189
More on Contours	191
Representing Vector Fields: Perceiving Orientation and Direction	193
Comparing 2D Flow Visualization Techniques.....	194
Showing Direction.....	196
Texture: Theory and Data Mapping	199
Tradeoffs in Information Density: An Uncertainty Principle	201
Primary Perceptual Dimensions of Texture	202
Texture Contrast Effects.....	202
Other Dimensions of Visual Texture.....	203
Nominal Texture Codes.....	204
Using Textures for Univariate and Multivariate Map Displays.....	205
Quantitative Texture Sequences	209
Perception of Transparency: Overlapping Data	211
Perceiving Patterns in Multidimensional Discrete Data	213
Pattern Learning.....	218
Priming.....	220
Vigilance	220
The Visual Grammar of Node–Link Diagrams.....	221

The Visual Grammar of Maps	227
Patterns in Motion	229
<i>Form and Contour in Motion</i>	231
<i>Moving Frames</i>	232
<i>Expressive Motion</i>	233
<i>Perception of Causality</i>	233
Perception of Animated Motion	235
<i>Enriching Diagrams with Simple Animation</i>	236
The Processes of Pattern Finding	236

Chapter 7 Space Perception..... 239

Depth Cue Theory	240
<i>Perspective Cues</i>	241
<i>The Duality of Depth Perception in Pictures</i>	242
<i>Pictures Seen from the Wrong Viewpoint</i>	244
<i>Occlusion</i>	246
<i>Shape-from-Shading</i>	247
<i>Shading Models</i>	248
<i>Cushion Maps</i>	249
<i>Surface Texture</i>	250
<i>Cast Shadows</i>	253
<i>Distance Based on Familiar Size</i>	255
<i>Depth of Focus</i>	255
<i>Eye Accommodation</i>	256
<i>Structure-from-Motion</i>	256
<i>Eye Convergence</i>	258
<i>Stereoscopic Depth</i>	258
<i>Problems with Stereoscopic Displays</i>	260
<i>Frame Cancellation</i>	261
<i>The Vergence–Focus Problem</i>	261
<i>Distant Objects</i>	262
<i>Making Effective Stereoscopic Displays</i>	262
<i>Cyclopean Scale</i>	264
<i>Virtual Eye Separation</i>	264
<i>Artificial Spatial Cues</i>	266
Depth Cues in Combination	269
Task-Based Space Perception	272
<i>Tracing Data Paths in 3D Graphs</i>	272
<i>Judging the Morphology of Surfaces</i>	276
<i>Conformal Textures</i>	277
<i>Guidelines for Displaying Surfaces</i>	280
<i>Bivariate Maps—Lighting and Surface Color</i>	281
<i>Patterns of Points in 3D Space</i>	282
<i>Perceiving Patterns in 3D Trajectories</i>	283
<i>Judging Relative Positions of Objects in Space</i>	284
<i>Judging the Relative Movements of Self within the Environment</i>	285

Selecting and Positioning Objects in 3D	286
Judging the “Up” Direction	288
The Aesthetic Impression of 3D Space (Presence).....	289
Conclusion.....	290
Chapter 8 Visual Objects and Data Objects.....	293
Image-Based Object Recognition	294
Priming.....	296
Searching an Image Database	297
Life Logging	298
Structure-Based Object Recognition.....	299
Geon Theory.....	299
Silhouettes	299
The Object Display and Object-Based Diagrams.....	303
The Geon Diagram	305
Faces	308
Coding Words and Images	311
Mental Images	312
Labels and Concepts.....	313
Object Categorization	313
Canonical Views and Object Recognition.....	315
Concept Mapping	316
Concept Maps and Mind Maps	316
Iconic Images versus Words versus Abstract Symbols	320
Static Links	321
Scenes and Scene Gist	322
Priming, Categorization, and Trace Theory	322
Conclusion.....	323
Chapter 9 Images, Narrative, and Gestures for Explanation.....	325
The Nature of Language.....	326
Sign Language.....	326
Language Is Dynamic and Distributed over Time.....	328
Is Visual Programming a Good Idea?	328
Images versus Sentences and Paragraphs.....	331
Links between Images and Words.....	332
Integrating Visual and Verbal and the Narrative Thread.....	333
Linking Text with Graphical Elements of Diagrams	333
Gestures as Linking Devices in Verbal Presentations.....	333
Deixis	334
Symbolic Gestures	336
Expressive Gestures.....	336
Animated versus Static Presentations.....	337
Visual Narrative	339
Animated Images	341
Conclusion.....	343

Chapter 10	<i>Interacting with Visualizations</i>	345
Data Selection and Manipulation Loop		346
Choice Reaction Time		346
Two-Dimensional Positioning and Selection		347
Hover Queries		348
Path Tracing		349
Two-Handed Interaction		349
Learning		350
Control Compatibility		351
Exploration and Navigation Loop		353
Locomotion and Viewpoint Control		354
Spatial Navigation Metaphors		355
Wayfinding, Cognitive Maps and Real Maps		359
Landmarks, Borders, and Place		361
Frames of Reference		362
Egocentric Frame of Reference		362
Exocentric Frames of Reference		363
Map Orientation		364
Focus, Context and Scale in Nonmetaphoric Interfaces		366
Distortion Techniques		368
Rapid Zooming Techniques		370
Elision Techniques		371
Multiple Simultaneous Views		372
Conclusion		373
Chapter 11	<i>Visual Thinking Processes</i>	375
The Cognitive System		376
Memory and Attention		377
Working Memories		378
Visual Working Memory Capacity		379
Change Blindness		380
Spatial Information		381
Attention		383
Object Files, Coherence Fields, and Gist		384
Long-Term Memory		386
Chunks and Concepts		388
Knowledge Formation and Creative Thinking		388
Knowledge Transfer		389
Visualizations and Mental Images		392
Review of Visual Cognitive System Components		393
Early Visual Processing		393
Pattern Perception		393
Eye Movements		393
The Intrasaccadic Scanning Loop		393
Working Memory		394

<i>Mental Imagery</i>	394
<i>Epistemic Actions</i>	394
<i>Visual Queries</i>	396
<i>Computational Data Mappings</i>	396
Visual Thinking Algorithms	397
Algorithm 1: Visual Queries	398
Algorithm 2: Pathfinding on a Map or Diagram	400
<i>Visual Query Construction</i>	401
<i>The Pattern-Finding Loop</i>	402
Algorithm 3: Reasoning with a Hybrid of a Visual Display and Mental Imagery	403
Algorithm 4: Design Sketching	405
Algorithm 5: Brushing	407
Algorithm 6: Small Pattern Comparisons in a Large Information Space	408
Algorithm 7: Degree-of-Relevance Highlighting	412
Algorithm 8: Generalized Fisheye Views	415
Algorithm 9: Multidimensional Dynamic Queries with Scatter Plot	417
Algorithm 10: Visual Monitoring Strategies	420
Conclusion	422
 Appendix A <i>Changing Primaries</i>	425
 Appendix B <i>CIE Color Measurement System</i>	427
 Appendix C <i>The Perceptual Evaluation of Visualization Techniques and Systems</i>	431
Research Goals	431
Psychophysics	433
<i>Detection Methods</i>	434
<i>Method of Adjustment</i>	435
Cognitive Psychology	435
Structural Analysis	436
<i>Testbench Applications for Discovery</i>	436
<i>Structured Interviews</i>	437
<i>Rating Scales</i>	438
Statistical Exploration	438
<i>Principal Components Analysis</i>	438
<i>Multidimensional Scaling</i>	439
<i>Clustering</i>	439
<i>Multiple Regression</i>	439
Cross-Cultural Studies	439
Child Studies	440
Practical Problems in Conducting User Studies	440
<i>Experimenter Bias</i>	440
<i>How Many Subjects to Use?</i>	441
<i>Combinatorial Explosion</i>	442
